Elements of Thermodynamics Indispensable link between seismology and mineral physics. Physical quantities are needed to describe the state of a system: •Scalars: Volume, pressure, number of moles •Vectors: Electric or magnetic field •Tensors: Stress, strain. The four laws of thermodynamics are: Zeroth law of thermodynamics: If two systems are in thermal equilibrium with a third system, they are in thermal equilibrium with each other. This law helps define the concept of temperature.

The major elements of a geothermal power plant are the wells, piping system, geofluid processing equipment (eg, separators and flashers), turbines, condensers, heat exchangers, cooling towers, and pumps. These are analyzed using the first and second laws of thermodynamics and fluid mechanics.
