Surfaces and Interfaces publishes research papers in all fields of surface science which may not always find the right home on first submission to our Elsevier sister journals.* The journal aims at being a fast and efficient platform for disseminating scientific results in this wide area of research. Read the latest articles of Surfaces and Interfaces at curlyshue.com, Elsevier's leading platform of peer-reviewed scholarly literature. Surfaces & Interfaces. Understanding the role of surfaces and interfaces is critical to fields as diverse as catalysis, surface physics, corrosion, nano- science, tribology, geochemistry and electrochemistry, and energy production. Materials of interest include biomembranes, oxide films, semiconductor nanowires, metal alloys, and composites. Some of the most important chemical and physical processes on our planet occur at a surface or interface. The surface of a medium whether it be a liquid or a solid has very special properties which are often quite distinct from the bulk substance. Surface and Interface Analysis is devoted to the publication of papers dealing with the development and application of techniques for the characterization of surfaces, interfaces and thin films. Papers dealing with standardization and quantification are particularly welcome, and also those which deal with the application of these techniques to industrial problems. "Surfaces and Interfaces of Solids" emphasizes both experimental and theoretical aspects of surface and interface physics. Beside the techniques of preparing well-defined solid surfaces and interfaces basic models for the description of structural, vibronic and electronic properties of interfaces are.
